About Corpore

Corpore is an award-winning absence, injury and risk management provider who offer innovative solutions in controlling the rising costs of personal injury claims, by assisting injured people back to function and work.

Our team of highly experienced injury consultants support injured people in their recovery back to health and into the workplace. We have access to a managed National Treatment Network of independent professionals to ensure the appropriate intervention is received at the right time.

Our business is about 'Evidencing Value' and we provide our customers with cost-effective solutions across our full range of services. We understand that rehabilitation is applied to get the claimant back to function and into the workplace, whilst saving our customers money, creating a win-win situation for all involved.

Results

Motor Claims:

Minor Injuries: We provided a fast-track rehabilitation service to a personal lines motor insurer and achieved:

- A successful return to work rate of **89%**
- An average of two treatment sessions (against an industry benchmark of six to seven)
- 55% of direct claimants did not subsequently appoint a solicitor

Major Injuries: We provided our field case management service to a large personal lines motor customer and achieved:

- A successful return to function and work rate of **85%**
- An average saving of **£1,281.24** per case*

*Savings represent reduced loss of earnings by an earlier return to work

Currently demonstrating a saving of **£12.04** for every **£1** spent

Creditor Claims:

Working in close partnership with a large banking creditor customer, developing a mutually beneficial relationship, we:

- Returned employees to work **95 days** earlier than expected without rehabilitation intervention*
- Achieved an average saving of **£110** per case

* Based on the Medical Disability Guidelines

Employers' Liability Claims:

Minor Injuries: We provided a fast-track desktop triage service to a large employers' liability insurer to achieve:

- A successful return to work rate of **91%**
- Settlement of claims for a third less than those without desktop case management

Corporate/Employer Claims:

A large manufacturer in the UK was struggling with high absence management rates due to workplace injuries. We worked with the customer to revise their approach to health and safety and encourage the organisation to become more proactive, rather than reactive. For absent employees, we developed return to work options to support them back into work. The results showed:

- Reportable injuries fell by almost **40%**
- Lost days from incidents fell by **62%**, from 24 days to 9)

Example: Earnings of £100 per day result in savings of £1,500
